KARNATAKA RESERVOIR OBSERVATORY

Krishna Raja Sagara

Generated 2026-10-22 · historical monitoring report

Review not required

No increase between the latest comparable estimates; the latest value is below the lower historical reference.

Observation	Concentration and date
Earlier comparable	11.78 µg/L on 2026-09-10; composite 2026-09-01 to 2026-09-10
Most recent available	7.01 µg/L on 2026-09-20; composite 2026-09-11 to 2026-09-20
Change	-40.5% (-4.77 µg/L)
Monitoring review	Not required

WHO monitoring reference

Historical WHO 1999/2003 recreational-water guidance summarized by EPA. Cyanobacteria dominance must be established before applying these guidance levels. These are not Karnataka regulatory limits.

10 µg/L - WHO historical lower guidance level (1999/2003)
Source: WHO/EPA published monitoring guidance; applicable when cyanobacteria dominance is established.

50 µg/L - WHO historical higher guidance level (1999/2003)
Source: WHO/EPA published monitoring guidance; applicable when cyanobacteria dominance is established.

Numeric comparison: Below lower reference

Numeric comparison only. Confirm cyanobacteria dominance before applying WHO cyanobacteria guidance. This is not a water-safety clearance.

Basis and limitations

A positive concentration change triggers the user-requested trend review. This is not a WHO percentage-change threshold. A declining concentration can still meet a WHO reference level. Reviews describe archived observations and are not current water-safety assessments.

Provisional Copernicus satellite estimate (10-day composite), not a field measurement. Interior water mask, dataMask, NOBS and finite-value screening applied. Provider quality flags and relative uncertainty are retained; full flag interpretation and local accuracy remain unverified.

Dated satellite chlorophyll observations

Observation / period end	Chlorophyll-a (µg/L)
2026-09-20	7.01
2026-09-10	11.78
2026-08-31	8.99
2026-08-20	5.06
2026-07-31	9.80
2026-07-20	10.59
2026-06-20	17.83
2026-06-10	12.90
2026-05-31	10.35
2026-05-20	15.39
2026-05-10	13.24
2026-04-30	17.18

Up to twelve most recent satellite observations are listed. Composite dates represent period ends. Missing values remain empty.
